GR-48

Patent

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: Gunther Silberbauer
Serial No: 10/066,085
Filed: January 31, 2002
For: DEVICE FOR COLLECTING PRINTED SHEETS IN A CERTAIN
SEQUENCE ASTRIDE AND ATOP ONE ANOTHER TO FORM A
PRINTED PRODUCT
Examiner: Mark A Deuble
Art Unit: 3651

Mail Stop: Appeal Brief
Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

REPLY BRIEF

S I R:

In response to the Examiner's Answer dated May 9, 2005,
applicant submits the present Reply Brief.

Müller teaches a continuous transfer of printed products

from a small chain 2 onto a wider double chain 3 with two parallel chain strands, whereby the small chain 2 never runs above the wide double chain 3 but instead, after the transfer position between the chain strands of the double chain 3, the small chain 2 descends in order to exit the transport region of the double chain.

Even if one gives a broad interpretation to "above", this attribute is not suggested by either of the chains of Müller. Müller requires a flush upper edge of the chains in the transfer area in order to avoid disturbances in the transport.

Thus, there is no teaching by Müller of a support above the conveying device, as in the present invention.

Therefore, in view of the foregoing, it is submitted that the Examiner's rejections are in error and should be overturned.
